Personal Statement

The fulfillment of academic ambitions is an important element in promoting an individual's satisfaction in life. Achieving the highest academic qualifications and attaining the relevant skills in the field of Data Science have always been my passion. I have developed a passion for solving data problems in my field of work through the use of statistical research and methodologies. My interest in data science is based on my ability to comfortably deal with statistical methods, therefore I regard the field as the most suitable for me. I am focused on becoming a data scientist and I believe the Master's program in Data Science will sharpen my skills and help me show my ambitions.

I graduated from the Grand Canyon University, Arizona with the Diploma of a Bachelor of Science in Health Care Administration. I have professional experience of being a Data Analyst Consultant at GuideWell Connect, Jacksonville, FL where I am charged with the responsibility of determining improvement strategies and giving recommendations based on data analysis and campaign results among other responsibilities. I worked at the DHHS Medicaid, Lincoln, NE where I participated in product deliverables such as Data Conversion and Load Plan. I have also worked at MEDEANALYTICS, Emeryville, CA where I helped facilitate implementations and served as a subject matter expert of new and existing solutions upgrade.

Besides, I participated in projects related to data analysis and computing such as leading the quality assurance projects and designed analytics surrounding the new HEDIS tool engine at

MEDEANALYTICS, Emeryville, CA. I also helped develop complex programming logic to calculate retroactive adjustments for Public Employee Retirement System resulting in \$100K annual savings at Health Net, Woodland Hills, CA. My educational and professional background has equipped me with a wide range of information related to the field of Data Science and this program will help me become a highly qualified Data Scientist with strong professional and educational experience.

I am always passionate about helping the organizations I work for by solving data challenges in the organizations and giving analytical insights into them. I also dedicate efforts towards mentoring individuals and teams in the organizations by improving the data literacy for the individuals and across the teams. The program will help me improve my data storytelling skills and realize my dream of becoming a professional Data Scientist. I wish to study the Master program at this institution since I have established that the institution is focused on producing graduates who are well imparted with the holistic view of how organizations turn data into actionable insights in the various departments.

I am focused and committed to the work I engage in and I believe in producing the best out what I do. I gladly recognize the high level of expertise and professionalism that I will gain from the institution. I will be very useful to this institution, the academic world, and the society at large once I get admission into the Syracuse University School of Information Studies for the Master's program in Data Science.
